**DETAILED ACTION**

1. Applicant's cooperation is requested in correcting any error of which applicant may become aware in the specification.

***Information Disclosure Statement***

2. The information disclosure statement submitted on 03/19/2004, has been considered by the examiner and made of record. See attached form PTO-1449.

***Double Patenting***

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-22 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-32 of copending Application No. 10/099,044. Although the conflicting claims are not identical, they are not patentably distinct from each other because the instant

invention claimed a waveguide including a number of hollow core fiber arranged longitudinally around a hollow guide region as two dimensional photonic crystal with a photonic bandgap, and the hollow guide region includes geometry that is shaped to channel a signal frequency that is substantially within the photonic bandgap, whereas the copending application does have the array of hollow cores fiber arranged longitudinally about an axis to define a central hollow core about the axis, wherein the array is formed as a two dimensional photonic crystal with a photonic bandgap that allows radiation of a select frequency range to propagate down the central hollow core.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

#### ***Allowable Subject Matter***

4. The following is a statement of reasons for the indication of allowable subject matter: the claims are allowable over prior art of record, because none of the references in alone or in combination discloses a number of hollow core optical fibers arranged longitudinally around a hollow guide region; wherein the number of hollow core fibers are arranged as a two dimensional photonic crystal with a photonic bandgap; and wherein the hollow guide region includes geometry that is shaped to channel a signal frequency that is substantially within the photonic bandgap.

Art Unit: 2874

The Barkou et al reference does not disclose a number of hollow core optical fibers, this article mentions a honeycomb photonic crystal fiber by adding an extra central air holes.

The above rejected claimed will be allowable with a terminal disclosure.
